

The Leader In Fastening Curtain Wall-Glazing Applications For 30+ Years

- Proprietary heat treating process resists hydrogen assisted corrosion cracking
- Innovative STALGARD® coating for superior corrosion resistance.
- Approved and recognized by ICC and LARR
- Elco offers a complete line of "Flex" products to fit a number of applications.
- Special lengths and diameters available upon request
- Call for a free demonstration or full color brochure.

Let us show you how to do it right the first time!

Stalgard® High-Performance Protective Coatings

Provide consistent, high corrosion resistance in construction applications

Stalgard® durable, multi-layer, corrosion-resistant coatings are engineered to provide optimal performance in demanding construction applications. These environmentally-friendly finishes are free of chromates and silicates and any process, like electroplating, that might induce hydrogen embrittlement, preventing structural failures.

- Maximizes fastener performance
- Salt spray at 1000+ hours with no red rust per ASTM B117
- Uniform thickness
- Low coefficient of friction eliminates the need for post-coating lubricants to ease installation
- Does not use processes that introduce hydrogen will not cause brittle failures like those caused by electroplating
- Durable tough finish doesn't come off during handling or repeated installations
- Clean and dry no oily residue
- Eliminates the plating process, resulting in a more environmentally-friendly product than those with plated zinc or other finishes
- Blue, grey, and white Stalgard are ACQ-compatible
- Maintains drilling and tapping performance

Stalgard Coating for Induction Heat-Treated Fasteners

Proven, outstanding corrosion resistance for most

construction applications, including metal and wood Salt spray resistance: 1000 hours per ASTM B117

Available colors: silver, black, blue, white, yellow, red, gray and brown

Stalgard GB (Galvanic Barrier) Coating

Standard on all Elco stainless steel fasteners

Prevents a galvanic reaction between the stainless steel and dissimilar application materials, which could lead to fastener and/or joint failure Salt spray resistance: 1000 hours per ASTM B117

Available color: Silver

Stalgard SUB Ultimate Barrier Coating

For more severely-corrosive environments

Salt spray 2,000 hours per ASTM B117

Available color: Silver

Drill Screws

†NOTE: Test values shown are ultimate average values obtained under laboratory conditions and apply to fasteners manufactured by Elco Construction Products only.

NOTE: All performance data shown is based on tests performed under laboratory conditions at independent construction testing facilities. The appropriate safety factor should be applied and code requirements factored into specification and use of these fasteners. A safety factor of 4:1 or 25% of the ultimate average values shown is generally accepted as an appropriate working load. Final determination of the appropriate safety factor and use of these fasteners is the sole responsibility of the user, specifying Engineer, Architect or other responsible person designing the connection. Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document.

Self-drilling fasteners in the most popular sizes

Self-drilling fasteners eliminate separate drilling and tapping operations for faster, more economical installations.

Specifications

• Diameters: #8 to 5/16"

• Lengths: 1/2" to 4"

• Drill Points: Drilit® forged or Drilltite® dual-processed

• Drive Systems: Hex and phillips

• Material: Carbon steel

• Finishes: Stalgard® coating or zinc

Features & Benefits

- Eliminates separate drilling and tapping operations
- Fasteners coated with Stalgard finish typically show no red rust or other base metal corrosion on significant surfaces even after 1000 hours of 5% neutral salt spray exposure (per ASTM B117)

Drilit[®] Drill Screws with Bonded Sealing Washers

Economical fasteners for applications requiring a weather-tight seal

This economical line of drill screws provides a weather-tight seal for protection against the elements.

Specifications

- Diameters: #10 to 1/4"
- Lengths: 3/4" to 4"
- Head Styles: Hex washer
- Drive System: Hex
- Point Types: #1 to #5
- Material: Carbon steel • Finish: Stalgard® coating

Features & Benefits • FPDM washer material is

- UV- and heat-resistant for long-term protection against leakage
- Stalgard coating provides 1000 hours of salt spray resistance (per ASTM B117)

To assure a weather-tight seal, fasteners must be properly installed.

Drilit[®] Drill Screws for Wood-to-Metal Applications

For efficient fastening of wood or composite materials to steel

These self-drilling fasteners eliminate separate drilling and tapping operations for faster installation in wood-to-metal applications.

Specifications

- Diameters: #10 to 1/4"
- Lengths: 3/4" to 3-15/16"
- Head Styles: Flat and wafer
- Drive System: Phillips
- Point Styles: Types 3 and 4
- Material: Carbon steel
- Finishes: Gray Stalgard® coating

Features & Benefits

- Eliminates pre-drilling of wood
- Broad selection of sizes
- Can be used with steel up to 5/16" thick
- Gray Stalgard coating provides 1000 hours of salt spray resistance; developed for use with ACQ-treated lumber with retention levels no higher than .25 PCF

Drilling and Tapping Capacity for Wood to Metal Screws (Maximum Material Thickness)*

- * **NOTE:** Some drill and tap capacities may vary due to special features on some fasteners. Refer to product performance specifications for any individual fastener to confirm performance and capabilities.
- ** Bi-Flex fasteners only. See page 17 & 18 for details.

NOTE: Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document. For additional product information and technical assistance, please contact Elco directly at 1-800-435-7213.

Drill Screws with Extended Drilling Capacity

Specially-designed drill points handle the toughest applications

This line of heavy-duty drill screws is designed to speed installation in steel applications up to 1/2" thick.

Specifications

• Diameters: #12 and 1/4"

• Lengths: 7/8" to 8"

• Head Style: Hex washer

• Drive System: Hex

• Material: Carbon steel

• Finish: Silver Stalgard® coating

Features & Benefits

- Points are either Drilit® forged or Drilltite® precision milled points
- Can drill metal up to 0.500" thick
- Stalgard coating provides 1000 hours of salt spray resistance (per ASTM B117)

Catalog No.	Description	Point Type	Finish	Carton Quantity	Carton Weight

^{*} denotes globally-sourced product.

NOTE: 1/4-20 drill screws with #5 points are available with bonded washers.

For use in metal-to-wood applications

High-performance fastener designed specifically for attaching light-gauge metal panels (18 ga. max.) to wood frame structures.

Specifications

- Size: #10
- Lengths: 1" to 3"
- Head/Drive: 1/4" HWH
- Thread: Hi-lo
- Point: Type 17
- Material: Carbon steel
- Finish: Stalgard® coating

Features & Benefits

- Aluminum bonded sealing washer
- High-low thread increases performance
- Easily penetrates multiple panel thicknesses
- Stalgard coating provides 1000 hours of salt spray resistance (per ASTM B117)

Watertight flashing for metal roofs

For over 40 years, DEKS has been providing all-in-one, watertight flashing for metal roofs. Each come with DEK's 20-year quarantee.

Specifications

- 4 unique designs
- Gray Dektite Original: provides 10mm (1/2") continuous contact
- Gray Dektite Soaker: engineered for use in "soaker territory"
- Gray Retrofit Original: built-in crimp snaps around existing piping
- Red Dektite Silicone: Can withstand a wide range of temperatures

Features & Benefits

- Quality polymers and engineering provide proven performance - used globally for over 40 years
- Brand name and clear size markings ease identification and sizing

Architectural Roof Clip Fasteners

Low-profile head design for wood and steel applications

The efficiency of self-drilling fasteners and the aesthetics of an unobtrusive head are ideal for attaching metal roof clips to metal and wood.

Specifications

- Diameters: #10 to #12"
- Lengths: 1" to 2"
- Head Styles: Pancake
- Drive Systems: Phillips
- Material: Carbon steel
- Finishes: Silver or gray Stalgard® coating

Features & Benefits

- Eliminates separate drilling and tapping operations
- Pancake head improves aesthetics and prevents panel dimpling
- Stalgard coating provides 1000 hours of salt spray resistance (per ASTM B117)

Dril-Flex® Structural Drill Screws

Virtually immune to delayed embrittlement failures

Dual heat treated drill screws provide the strength, ductility and resistance to embrittlement required for critical applications.

Specifications

• Diameters: #10 to 5/16"

- Lengths: 3/4" to 4"
- Head/Drive Styles: Hex washer and phillips pan, wafer and undercut flat
- Point Types: #3, #4 and #5
- Material: Allov steel
- Heat Treat: Grade 5
- Finish: Silver Stalgard® or Stalgard SUB coating

Features & Benefits

- Stalgard SUB coating (Hex washer product only) provides 2000 hours of salt spray resistance (per ASTM B117)
- High-hardness points and lead threads for drilling and tapping with lower-hardness in load-bearing threads for ductility
- Virtually immune to delayed embrittlement failures

Comparison to Stainless Steel Screws

300 series stainless steel fasteners provide high resistance to hydrogen embrittlement failures. However, stainless steel is galvanically incompatible with aluminum or steel panels. In this case, stainless steel fasteners trigger a sacrificial action, which can lead to degradation of the panel and loosening of the fastener.

A dual-hardening process allows Dril-Flex® fasteners to provide high strength and resistance to hydrogen embrittlement failures. Their Stalgard® finish provides corrosion resistance several times greater than

Anodic End	
Metal/Alloy	EMF(v)
Magnesium	-1.60
Zinc	-1.10
Alum (5000, 6000, 7000)	75
Iron, Low Alloy Steels	70
Alum (2000)	60
Lead	55

Embrittlement Tests

Embrittlement testing of Dril-Flex screws was performed in accordance to ASTM F1624-06. Fastener lots were tested to determine their Threshold Stress Limits for both Internal Hydrogen Embrittlement and Environmental Hydrogen Embrittlement. Threshold Stress Limit is the stress level below which no time-dependent cracking will occur. Above this level, subcritical cracking that leads to time-delayed fracture or embrittlement may occur if the fastener is exposed to a hydrogen environment.

Embrittlement Test Results

- Dril-Flex fasteners have a hardness range of HRC 28 – 34, which is roughly equivalent to a SAE Grade 5 fastener (HRC 25 – 34).
- Dril-Flex fasteners showed resistance to the effect of hydrogen-assisted cracking when loaded to 75% of their tensile strength. This is within accepted industry guidelines for in-service loading conditions.
- Dril-Flex fasteners showed no degradation or failures in tensile strength below their ultimate tensile strength.

NOTE: All performance data shown is based on tests performed under laboratory conditions at independent construction testing facilities. The appropriate safety factor should be applied and code requirements factored into specification and use of these fasteners. A safety factor of 4:1 or 25% of the ultimate average values shown is generally accepted as an appropriate working load. Final determination of the appropriate safety factor and use of these fasteners is the sole responsibility of the user, specifying Engineer, Architect or other responsible person designing the connection. Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document

For additional product information and technical assistance, please contact Elco directly at 1-800-435-7213.

^{*} for aluminum applications only.

Tap-Flex™ Thread-Forming Structural Screws

Increased thread engagement with strength and ductility

Feature a unique thread profile to ease installation and increase performance.

Specifications

- Diameters: 3/8", 1/2", and 5/8"
- Head Style: Hex washer
- Threads: E-Form® five-lobe thread forming
- Material: Alloy steel
- Finish: Silver Stalgard® SUB coating
- Heat Treat: Grade 5; meets ASTM A449 specifications (120 KSI strength)

Features and Benefits

- E-Form thread overcomes friction build-up and reduces drive torque
- Roll forms own work-hardened thread to resist loosening and provide enhanced pull-out values
- Virtually immune to delayed embrittlement failures
- Stalgard SUB coating provides 2000 hours of salt spray resistance (per ASTM B117)

Identification

Bi-Flex™ 300 Series Stainless Steel Bi-Metal Self-Drilling Screws

Bi-metal technology provides outstanding corrosion resistance and long service life

Bi-Flex™ fasteners provide the corrosion resistance of 300 series stainless steel and the efficiency of drillscrews.

Specifications

- Diameters: #10 to 1/4"
- Lenaths: 3/4" to 8"
- Drive Systems: Hex and phillips
- Material: Hardened steel tapping threads and point fused onto an 18-8 stainless steel shank and head
- Finish: Stalgard® GB (Galvanic Barrier) coating

Features & Benefits

- High strength, ductility and reliability
- Virtually immune to delayed embrittlement failures
- Greater galvanic compatibility in dissimilar metal applications involving aluminum
- High in-place value over the life of application

Susceptibility To Embrittlement Failures

In head to head testing, Bi-Flex™ 300 fasteners and three different types of 400 series martensitic stainless, self-drilling screws were installed in identical test coupons of unplated steel and aluminum. They were then subjected to a mildly corrosive environment of 5% neutral salt spray testing per ASTM B117. At the start of the test all samples were torqued (preloaded) to 75 in lbs. Every 24 hours the samples were inspected for torque value and retorqued to 75 in lbs.

The parts were evaluated by scanning electron microscope (S.E.M.) to determine the type of fracture that had occurred. The three 400 series fasteners showed an intergranular type failure, indicative of fracturing that occurs from hydrogen assisted stress corrosion cracking. No failures or loss of preload occurred with the Bi-Flex fasteners.

All fasteners were placed through a clear hole in 6061 T6 aluminum with a thickness of 0.125" and drilled into an unplated steel strip measuring a thickness of 0.125". A strip of 0.060" aluminum was placed in between the 0.125" aluminum and steel strip on one side, to simulate a fastener placed under load.

NOTE: All performance data shown is based on tests performed under laboratory conditions at independent construction testing facilities. The appropriate safety factor should be applied and code requirements factored into specification and use of these fasteners. A safety factor of 4:1 or 25% of the ultimate average values shown is generally accepted as an appropriate working load. Final determination of the appropriate safety factor and use of these fasteners is the sole responsibility of the user, specifying Engineer, Architect or other responsible person designing the connection. Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document

For additional product information and technical assistance, please contact Elco directly at 1-800-435-7213.

Alumi-Flex™ 302 (18-8) Stainless Steel Drill Screws

For fastening to aluminum when corrosion and galvanic reaction are a primary concern

Stainless steel drill screws provide strength and corrosion resistance in a variety of aluminum applications.

Specifications

- Diameters: #10 to 1/4"
- Lengths: 1/2" to 1-1/2" • Head Style: Hex washer
- Drive System: Hex
- Point Types: #3 and #4 • Material: 302 stainless steel
- Finish: Stalgard® GB (Galvanic Barrier) coating

Features & Benefits

- Provides a very high level of corrosion resistance
- Coating allows greater galvanic compatibility in dissimilar metal applications involving aluminum
- Head marked with a "3" for easy identification

AllFlex™ 302 Stainless Steel Fasteners

High performance in aluminum applications

302 stainless steel thread-cutting/self-tapping fasteners with Stalgard® GB coating to prevent galvanic reactions and increase corrosion resistance.

Specifications:

- Diameters: #10 − 1/4"
- Head Styles: Hex washer, pan, flat and flat undercut
- Drive Systems: Hex washer and phillips
- Thread/Point Styles: Type F, B or AB
- Material: 302 stainless steel
- Finish: Stalgard GB (Galvanic Barrier) coating

Benefits

- Roll-form or cut own mating threads in aluminum components to eliminate tapping operations and speed installation
- Stalgard GB coating prevents galvanic reaction between stainless steel fastener and aluminum components

Fab-Lok® Fasteners

To maintain panel integrity in high-stress and high-vibration environments

Vibration, either from inside or outside a building, can make ordinary fasteners loosen and back out. Fab-Lok fasteners combine a slotted aluminum sleeve and fastener to provide high resistance to vibration loosening. Excellent for use with insulated panels.

Specifications

- Drive System: Hex
- Materials: Low carbon steel or 300 series stainless steel screw with aluminum sleeve
- Finish: Zinc

Features & Benefits

- Hex washer head machine screw assembled to a slotted aluminum sleeve and EPDM sealing washer
- After tightening, clamping tines remain in place even if screw is removed
- Greater joint integrity with clamping force

UltraCon® Masonry Fastening System

Offers optimal performance in concrete, brick and hollow block applications

UltraCon anchors are available in a variety of styles to meet your needs.

Specifications

- Diameters: 3/16" to 5/16"
- Head Styles: Hex washer, flat, hex flange, TrimFit® hex and TrimFit flat
- Drive Systems: Hex and phillips
- Material: Carbon steel
- Finishes: Blue, silver, and white Stalgard® coating standard; bronze available upon request. Blue and white Stalgard are ACQ-compatible.

Features & Benefits

- Installs quickly when using Elco® installation tools
- When all three elements of the system are used, consistent performance and maximum pull-out strengths can be realized
- Stalgard coating provides 1000 hours of salt spray resistance (per ASTM B117)

Boxed Anchors

100 anchors and 1 tanged drill bit per box; 6 boxes per carton.

For 3/16", 1/4" and 5/16" UltraCon fasteners: Miami-Dade, Florida Notice of Acceptance (NOA) No. 11-0406.01

NOTE: All performance data shown is based on tests performed under laboratory conditions at independent construction testing facilities. The appropriate safety factor should be applied and code requirements factored into specification and use of these fasteners. A safety factor of 4:1 or 25% of the ultimate average values shown is generally accepted as an appropriate working load. Final determination of the appropriate safety factor and use of these fasteners is the sole responsibility of the user, specifying Engineer, Architect or other responsible person designing the connection. Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document.

For additional product information and technical assistance, please contact Elco directly at 1-800-435-7213.

UltraCon[®] SS4 Masonry Fastening System

400 stainless steel fasteners for concrete, brick and hollow block applications

UltraCon SS4 stainless steel masonry fasteners provide enhanced corrosion resistance and ductility over carbon steel fasteners.

Specifications

- Diameter: 1/4"
- Lenaths: 1-1/4" to 4"
- Head style: Hex washer head and TrimFit® flat
- Material: 410 stainless steel
- Finish: Silver Stalgard® coating

Features and Benefits

- Special heat treatment to protect inherent corrosion resistance of the 410 stainless steel material
- Stalgard coating provides 1600 hours of salt spray protection
- Installs with standard 3/16" masonry drill bit
- Miami-Dade Florida NOA No 13-1205.05

Crete-Flex® SS4 Masonry Fasteners

For masonry attachments requiring enhanced corrosion resistance

Crete-Flex® 410 stainless steel masonry fasteners provide high shear values, corrosion resistance and ductility for outstanding performance.

Specifications

- Diameters: #14 and 3/16"
- Lengths: 1-1/4" to 6"
- Thread Style: 14-10 heavy-duty
- Head Styles: Hex washer, hex flange. flat and Trimfit® flat
- Drive Systems: Hex and phillips
- Material: 410 stainless steel
- Finish: Silver Stalgard® coating

Features & Benefits

- Special heat treatment to protect inherent corrosion resistance of the 410 stainless steel material
- Stalgard coating provides 1600 hours of salt spray resistance
- Larger .201 root diameter provides exceptionally high shear values
- Miami-Dade County, Florida, NOA No. 12-0126.09

Note: All fasteners are packed 100 per box, 5 boxes per shipper unless otherwise noted.

Identification

In-place inspection can be made by identifying the special Crete-Flex head marking. This marking consists of an Elco® logo and a "4" as shown. The 3/16" diameter is indicated by 2 slots on opposite sides of the drive.

NOTE: All performance data shown is based on tests performed under laboratory conditions at independent construction testing facilities. The appropriate safety factor should be applied and code requirements factored into specification and use of these fasteners. A safety factor of 4:1 or 25% of the ultimate average values shown is generally accepted as an appropriate working load. Final determination of the appropriate safety factor and use of these fasteners is the sole responsibility of the user, specifying Engineer, Architect or other responsible person designing the connection. Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document.

For additional product information and technical assistance, please contact Elco directly at 1-800-435-7213.

Aggre-Gator® 300 Series Stainless Bi-Metal Masonry Fasteners

The corrosion resistance of 300 series stainless steel in a threaded concrete anchor

Aggre-gator® anchors provide unmatched corrosion resistance in demanding applications, such as those in coastal or wet areas.

Specifications

• Diameter: 1/4"

• Lenaths: 1-3/4" to 4"

- Heads: Hex washer and TrimFit® flat
- Material: 300 (18-8) stainless steel head and shank with fused and hardened steel tapping threads and gimlet point
- Finish: Silver-colored Stalgard® GB (Galvanic Barrier) coating

Features & Benefits

- High in-place value over life of structure
- High strength and ductility
- Offers greater galvanic compatibility in dissimilar metal applications involving aluminum
- Thread profile provides quick cutting and stability during installation
- Best choice for ACQ-treated lumber
- Miami-Dade NOA No. 13-0924.02

NOTES: Installation tools available: see page 30. Use 3/16" masonry drill bit to install. 50 anchors per box, 6 boxes per shipper.

Approvals:

Miami-Dade NOA No. 13-0924.02 High Velocity Hurricane Zone

Identification

The head markings consists of the number "3", the length code, and the Elco® logo as shown to the right.

TrimFit® head

Bi-Metal Technology Provides Unmatched Performance

- Head and shank made of 300 series (18-8) stainless steel alloy to provide unmatched corrosion resistance in your toughest applications
- Fused and hardened steel tapping threads make installation easy and hold tight in block and poured concrete
- Coated overall with silver-colored Stalgard GB, a galvanic barrier to protect aluminum components from accelerated corrosion when in contact with 300 series stainless steel

Aggre-Gator® 300 Series Stainless Bi-Metal Masonry Fasteners

The corrosion resistance of 300 series stainless steel in a threaded concrete anchor

- 1. Edge distances denoted herein shall be measured from the center of the anchor to the edge of the substrate in the direction of, as well as perpendicular to, the direction of the load. Spacing between anchors denoted herein shall be measured center-to-center of anchors.
- 2. Allowable loads suggested herein are only valid when both the minimum anchor center-to-center spacing and the minimum edge distances are complied with.
- 3. Allowable loads suggested herein equal 25% of the average ultimate laboratory test values obtained during testing performed as part of the requirements to obtain this NOA. Final determination of the appropriate working/design loads to be used in a specific project are the sole responsibility of the engineer of record or of the architect of record specifying the use of the product.
- 4. No increase in allowable stress has been incorporated into the values provided in the tables contained herein.

NOTES

- 5. Anchors approved under this product approval document have not been tested for use under combined loading.
- 6. The concrete substrate into which these anchors will be attached shall conform to ACI 301 specifications with strength properties as specified herein.
- 7. The hollow and grout-filled concrete block substrate into which these anchors will be attached shall be medium weight or normal weight concrete block conforming to ASTM C-90.
- 8. Combination wood and concrete substrate shall consist of 1 x 4 nominal (3/4" thick) treated No. 2 Southern Yellow Pine attached to concrete substrate conforming to ACI 301 specifications with strength properties as specified herein. or 2 x 4 nominal (1-1/2" thick) treated No. 2 Southern Yellow Pine attached to concrete substrate conforming to ACI 301 specifications with strength properties as specified herein.

NOTE: All performance data shown is based on tests performed under laboratory conditions at independent construction testing facilities. The appropriate safety factor should be applied and code requirements factored into specification and use of these fasteners. A safety factor of 4.1 or 25% of the ultimate average values shown is generally accepted as an appropriate working load. Final determination of the appropriate safety factor and use of these fasteners is the sole responsibility of the user, specifying Engineer, Architect or other responsible person designing the connection. Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document.

ConFlex® Large Diameter Concrete Screw Anchors

Enhanced ductility allows use in demanding exterior applications

ConFlex® masonry screws are engineered to provide high pull-out and shear values with virtual immunity to brittle failures.

Specifications

- Diameters: Oversized 3/8" and 1/2"
- Material: Alloy steel
- Head Style: Hex washer head with locking serrations
- Thread Style: Double-lead
- Finish: Silver Stalgard® coating
- Tensile Yield: 92,000 KSI min. (Grade 5); Tensile Ultimate: 120,000 KSI min. (Grade 5)

Features & Benefits

- Flex Technology® heat treat allows virtual immunity to brittle failures,
- Locking serrations under the head provide back-out resistance
- Hardened tip ensures efficient tapping
- Head markings allow easy inspection
- Install with standard ANSI bits

Suspender™ Threaded Rod Anchoring System

Anchoring system for threaded rod components

Suspender[™] anchors accept 3/8-16 or 1/2" threaded rod and components of piping systems for attachment to steel, masonry, and wood.

Specifications

- Sizes: 3/8-16; adaptor installs 1/2-13
- Lengths: 1" to 2"
- Drive System: Hex
- Material: Carbon steel
- Finish: Plating per ASTM B633 Type II Class 12

Features & Benefits

- One part works in both horizontal and vertical applications
- All parts FM/UL approved
- Decreased part numbers reduce complexity
- Color coded boxes for easy identification

HangerMate® Threaded Rod Anchoring System

Anchoring system for threaded rod components

HangerMate® anchors accept 1/4-20, 3/8-16 or 1/2" threaded rod and components of piping systems for attachment to steel, masonry, and wood.

Specifications

- Sizes: For use with 1/4-20 and 3/8-16 threaded rod; adaptor installs 1/2" threaded rod
- Lengths: 1-1/8" to 3"
- Drive System: Hex
- Material: Carbon steel
- Finish: Plating per ASTM B633 Type II Class 12

Features & Benefits

- Eases installation of sprinkler systems. strut, HVAC, cable trays and various piping systems
- Self-drilling points for steel; in wood applications, no pre-drilling is required
- Many styles UL listed and/or FM approved
- Installs with one universal HangerMate drive socket

^{*}Performance Testing Notes (both Suspender and HangerMate Anchors):

- 1. The loads indicated are average ultimate values achieved under laboratory conditions and appropriate safety factors should be applied for design purposes.
- 2. NFPA (National Fire Protection Assoc.) minimum fastening requirements are five times the weight of a 15-foot section of water filled pipe plus 250 lbs. This is 1475 lbs. for 4" pipe.
- 3. All test values were obtained using 3/8-16 rod. When 1/4-20 rod is used, the strength of the rod may be less than the pull-out values of the anchors.

Sample Applications

Attach Loop, Clamp Ring and Clevis Hangers and Shoes to Hang Piping for Sprinkler, General Plumbing and Other Systems

Mount Struts and Tracking Systems for Electrical Systems, Ceiling Grids and More

Hang Cable Trays

37

NOTE: All performance data shown is based on tests performed under laboratory conditions at independent construction testing facilities. The appropriate safety factor should be applied and code requirements factored into specification and use of these fasteners. A safety factor of 4:1 or 25% of the ultimate average values shown is generally accepted as an appropriate working load. Final determination of the appropriate safety factor and use of these fasteners is the sole responsibility of the user, specifying Engineer, Architect or other responsible person designing the connection. Due to a wide variety of application conditions or intervening factors not under our control, we assume no liability for the use of the information provided in this document

For additional product information and technical assistance, please contact Elco directly at 1-800-435-7213.

RapidSet® Tools

The fastest, easiest and most reliable way to install machine screw anchors

Efficient RapidSet $^{\circ}$ tools eliminate clumsy hammer and setting processes or expensive, slow expander tools. *

Specifications

- For machine screw anchor sizes #10, 1/4" and 3/8"
- Designed for use with power tools, including battery impact drivers
- MAXX model allows placement of 1/4" anchors at various depths (up to 2") below the surface

Features & Benefits

- Power tool does all the work no pounding with setting tools
- Automatically sets anchor just below the surface
- Maximizes expansion of bottom portion of lead sleeve, which results in consistently high pull-out values

Catalog No.	For Insert-Anchor Size
Standard RapidSet tool	
EZB790	#10-24
EZB800	1/4-20
EZB820	3/8-16
RapidSet MAXX tool	
EZB810	1/4-20
Catalog No.	Description
Repair Kits	
EZB811	Repair Kit for EZB810 (Rapidset MAXX Tool)
EZB801	Repair Kit for EZB800 (Rapidset Tool for 1/4-20 Inserts)

^{*} Note: RapidSet tools draw the anchor's internal insert up into the anchor's outer sleeve; this installation process eliminates the need to maintain a back bearing surface (required by hammer setting tools).
